

# FaaS - Food as a Service

Think globally, eat locally  
Moving food from the ground to the clouds and back

Svjetlana Krco

# mSoftOpera

---

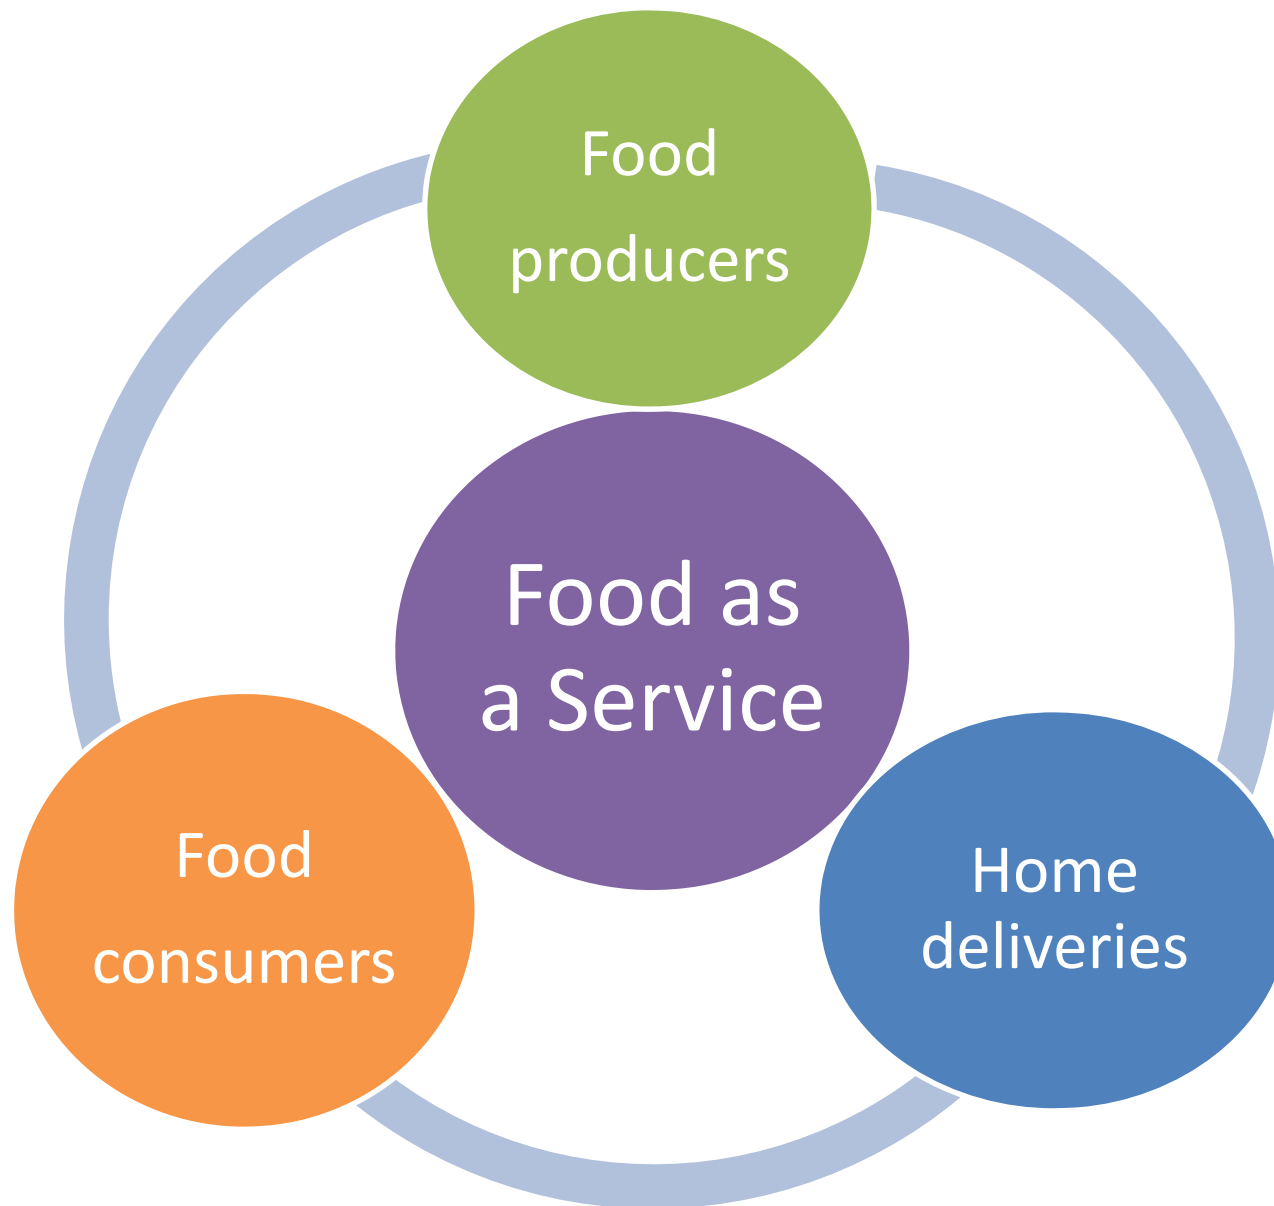

- focused on development of novel mobile and web based solutions
- Together with DunavNET, released VinAR, an augmented reality based smart phone catalogue of local and regional wines – [vinAR.me](http://vinAR.me)

# Team

# Project

---

# Project objectives

---

## Food consumers

- Access to known, trusted local producers and their products
- Notification service

## Food producers

- Access to motivated consumers
- Planning production based on preorders
- Reputation management
- Notification service

## For the crowd

- Opportunity for additional revenue

# FaaS and FIWARE

---

## FIWARE

### Context Broker - Orion Context Broker

- food producers as context providers (sale information, early samples availability, etc.)
- food consumers and home delivery providers as both context providers and context consumers (delivery requests, etc.)

### POI Data Provider GE

- localized searches of available fruits/vegetables/flowers that are on offer in a given area

## Flspace

- Development using Flspace SDK; deployment in the Flspace App store
- System & Data Integration (SDI) component to interact with FaaS backend services
- Security, Privacy, Trust component for identity and trust management
- BCM engine for interaction with Flspace apps (Matchmaking functionality of the Farmers app)
