

WePick

Be independent from
delivery timetables
Lower delivery costs

**Shared collect points for
online grocery deliveries**

What are the benefits of WePick?

Online grocery stores take advantages from

- cutting delivery costs (one delivery point instead of several customers' houses)
- drastically reducing unpredictable delivery time (not more affected by the customer presence at home)
- using delivery vans during the night, early in the morning or very late in the evening when they can access „limited traffic zones“ and delivery time is not affected by the car traffic

The competitive advantages coming from our delivery & picking model are

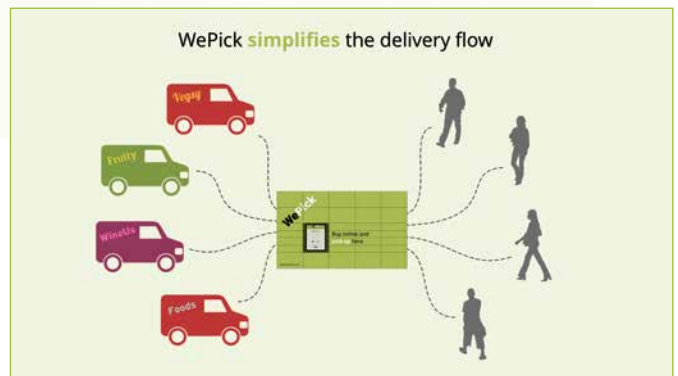

- more flexibility
- products quality preserved
- lower operational costs

End users are no more dependent from the delivery timetable.

How does WePick work?

We offer online grocery stores a delivery & picking model using a network of shared collect points working as follows:

- the end user orders the items and selects where to pick them in a list of collect points near to him/her
- the store delivers the items to the collect point where they are stocked in lockers specifically designed for fresh products; a key code is sent to the end user
- the end user picks the items using the key code

Meltin'Dots

Meltin'Dot is a SW development and application management company creating solutions for agriculture, logistics and manufacturing operations. It was established in 2008 and is located in Milano (Italy).
